

HO523

The BrightSign HO523 media player is an [Open Pluggable Standard](#) (OPS) compatible module that can be used to decode images, audio, and video (at resolutions up to 1920×1080×60p) for digital-signage and kiosk applications. In addition to driving audio/video devices, these players can be controlled with various networked and built-in interfaces.

This manual specifies the hardware interfaces and operational theory of the HO523.

Interfaces

Front	Back
WiFi antenna connector (1 of 2)	JAE TX25 (80 pins)
